Holland Green Infrastructure Tour

[Haworth Corporate Headquarters](#)

One Haworth Center, Holland MI 49423

This tour sponsored by

This tour will begin at Haworth Corporate Headquarters where participants will learn about and tour their green roof and other green aspects of the campus. If conditions allow, we will be able to see and discuss a wetland restoration that will be in progress in an adjacent field owned by Haworth, Inc. The wetland restoration is part of a larger effort called [Project Clarity](#), which aims to restore the water quality of Lake Macatawa. The tour will also include stops at Holland High School, where permeable pavement is being utilized in parking lots, and Hope Church, to learn about their efforts to manage parking lot runoff using rain gardens. Tour participants will meet at Haworth Corporate Headquarters and we will board a Macatawa Area Express trolley from there for the rest of the tour. Once the tour is done, it will be simple to hop on the highway from Haworth and head into Grand Rapids for the evening reception.

Muskegon - Lakeshore Trail Green Infrastructure Bicycle Tour

Beginning at [Pigeon Hill Brewing Company](#)

500 W. Western Ave., Muskegon, MI 49440

This field trip will feature scenic views of Muskegon Lake, rain gardens, a green roof and a two-mile stretch of restored Muskegon Lake shoreline habitat along the City of Muskegon's Lakeshore Trail bike path. The economic benefits and results of the West Michigan Shoreline Regional Development Commission's \$10 million Muskegon Lake shoreline habitat restoration project will be featured. Participants will meet in downtown Muskegon across the street from Pigeon Hill Brewing Company, grab a provided bike, and wind through Grand Valley State University Annis Water Resources Institute, LaFarge port terminal, Heritage Landing and Hartshorn Marina before entering the two-mile stretch of restored shoreline. The bicycle tour will end in the Lakeside business district at the Grand Trunk Launch Ramp. From there, participants will jump aboard a trolley to view additional green infrastructure and stormwater project sites. The guided trolley ride will conclude at Pigeon Hill Brewing Company (where the bicycle tour began). Participants will view the brewery's historic décor and virgin white pine tables, made from lumber-era sawmill wood that was repurposed from the Muskegon Lake shoreline habitat restoration project.
